

IN THE ABSTRACT

On page 10, please amend the paragraph as follows:

~~The invention relates to a~~ A conveyor unit with accumulation of receptacles-(2), such as bottles, ~~comprising~~ includes an accumulation table-(3) onto which a feed conveyor-(5) opens out upstream, whilst downstream-(7), ~~said the~~ table-(3) supplies ~~said~~ receptacles-(2) onto a passive aligner-(8) for leading the above in single file to a processing unit downstream-(9). Furthermore, the passive aligner (3) runs parallel to the accumulator table-(3), the above ~~comprising~~ having, in the downstream extension thereof, a transfer conveyor-(17), on which receptacles-(2) are pushed laterally by a guide rail-(18) towards ~~said the~~ passive aligner-(8) onto an adjacent transport conveyor-(19) running in the opposite sense which becomes the feed conveyor for ~~said the~~ passive aligner-(8).
